Job Title: Test Manager

Company: Vriba Technologies

Experience: Minimum 12 Years

Location: Remote

Shift Timings: US Shifts (6.30PM IST to 3.30AM IST)

Department: Quality Assurance / IT

Reports To: Offshore Delivery Manager

Job Type: Full-Time

Job Summary:

We are seeking a detail-oriented and experienced Test Manager to lead our software testing efforts. The ideal candidate will be responsible for defining the testing strategy, managing test teams, ensuring the quality of software products, and collaborating with cross-functional teams to deliver high-quality solutions on time and within budget.

Key Responsibilities:

- Develop and implement comprehensive test strategies and plans for projects.

- Lead and manage a team of testers (manual and/or automation).

- Coordinate testing activities across multiple projects and teams.

- Define quality metrics and ensure adherence to testing standards and best practices.

- Oversee the creation and execution of test cases, scripts, and scenarios.

- Manage defect tracking and resolution processes.

- Collaborate with developers, business analysts, and project managers to ensure requirements are testable and met.

- Provide regular status reports and quality metrics to stakeholders.

- Ensure test environments and test data are available and maintained.

- Drive continuous improvement in testing processes and tools.

Qualifications:

- Bachelor's degree in computer science, Information Technology, or a related field.

- Proven experience (typically 10+ years) in software testing, with at least 2 years in a leadership or managerial role.

- Proven experience in managing test plans, test strategies, and UAT status reports.

- Experience with test management tools (e.g., JIRA, TestRail, HP ALM).

- Working experience with automated testing tools (e.g., Selenium, JUnit, TestNG).

- Strong understanding of software development life cycles (SDLC), Agile, and DevOps practices.

- Excellent analytical, problem-solving, and organizational skills.

- Strong communication and leadership abilities.

Preferred Qualifications:

- ISTQB or equivalent certification.

- Experience in automation, performance and security testing.

- Knowledge of CI/CD pipelines and cloud-based testing environments.

Kindly share your resume to keerthanah.sekar@vriba.com

QA Lead Remote

Job Summary:

We are looking for a detail-oriented and skilled Automation Test Engineer to join our QA team. The ideal candidate will design, develop, and execute automated tests to ensure the quality and reliability of software products. This role involves working closely with developers, product managers, and other stakeholders to create and maintain robust test frameworks and improve overall software performance and stability.

Key Responsibilities:

- Design, develop, and execute automation scripts using testing tools (e.g., Selenium, Cypress, Playwright, etc.).

- Collaborate with cross-functional teams to understand business requirements and translate them into test cases.

- Maintain and improve existing automation test frameworks.

- Conduct performance, regression, and functional testing.

- Identify, record, and track bugs through to resolution.

- Generate test reports and metrics for stakeholders.

- Continuously explore new tools and technologies to enhance test automation.

Required Qualifications:

- Bachelors degree in Computer Science, Engineering, or related field.

- 9+ years of experience in software QA with a focus on automation testing.

- Proficient in at least one programming/scripting language (e.g., Java, JavaScript, C#).

- Strong knowledge of test automation frameworks (e.g., Selenium WebDriver, TestNG, JUnit, Cypress).

- Familiarity with CI/CD tools (e.g., Jenkins, GitLab CI/CD).

- Experience with version control systems (e.g., Git).

- Understanding of SDLC, STLC, and Agile methodologies.

Preferred Qualifications:

- Experience with API testing tools like Postman, REST Assured, or SoapUI.

- Knowledge of containerization and orchestration tools (e.g., Docker, Kubernetes).

- Exposure to cloud platforms (e.g., AWS, Azure, Google Cloud).

- ISTQB certification or equivalent is a plus.

Soft Skills:

- Excellent problem-solving skills and attention to detail.

- Strong communication and teamwork abilities.

- Ability to work independently and manage multiple priorities.

#ManualQA #HiringNow

Manual QA Engineer

Limassol, Cyprus (or fully remote if you're based in Europe)

Full-time | ERP Product | Fintech domain

Not just another QA vacancy

This is for someone who enjoys digging into complex enterprise systems, catching hidden bugs before they cause real-world chaos — in accounting, finance, and cash flow processes that companies rely on daily.

You'll be joining a company with 17+ years of expertise in ERP and SAP-based systems. They've built 250+ products, and the one you'll work on is big, established, and evolving.

Your day-to-day will include:

- Manually testing smart, serious business logic
- Writing clean test cases based on real workflows
- Verifying bug fixes and running solid regressions
- Collaborating with devs and PMs who value QA input
- Learning the product like it's your own

You're probably a good match if you have:

- 1+ year of experience in manual QA
- Experience with finance, ERP, accounting or cash management systems

(must-have)

- Basic SQL skills (enough to validate and investigate data)
- A structured, observant mindset — the kind that loves edge cases
- A university degree (any field — we care more about how you think)
- Comfortable English (B2+) and fluent/native Ukrainian / Russian

Work from the Cyprus office or fully remote if you're based in Europe

If you're looking for a place where QA really matters and where the product is bigger than just a few screens — drop me a line

https://www.linkedin.com/posts/marta-zagranovska-1ba798248_manualqa-hiringnow-activity-7354129322414063620-VPIu?utm_source=share&utm_medium=member_desktop&rcm=ACoAAEWlcfMB0f5XPOM2paJqlyMSA4VAmflXkpo

Hiring Senior QA Engineers (6+YoE) – Colombia (Remote)
Imagine working on a platform that thousands of service-based businesses rely on. From pest control companies to lawn care pros, and knowing that your tests are the reason things don't break when it matters most.

We're looking for a Senior Quality Assurance Engineer who doesn't just check boxes. Someone who understands the importance of thoughtful manual testing and robust automation. You'll work on a fast-scaling SaaS product (web and mobile) as part of a cross-functional Agile team, bringing quality to every release, every time.

You'll build and execute test cases, design scripts using WebDriverIO, and use Postman or similar tools to validate APIs. Your QA insights will help shape development from the very beginning, and you'll have the autonomy and trust to make it happen.

If you're passionate about:

- Owning the full QA process (manual + automation)
- Collaborating with devs, PMs, and designers
- Working remotely with a North American team
- And building software that actually solves real-world problems.

Then this role might be a great fit.

You'll be working with a company that's publicly traded, values digital innovation, and is scaling globally.

We're hiring across Colombia.

6+ years of QA experience, strong JS automation skills, and a mindset for quality over quantity? Let's chat or send your CV to
murrutia@intdevres.com

Job Title: CoreOS Quality Engineer
Location: Remote (USA)

Job Type: Full-Time

American IT Systems is a rapidly growing staffing and recruitment firm specializing in providing comprehensive hiring solutions across the United States. With a focus on both technical and non-technical roles, the agency offers flexible staffing options, including contract, contract-to-hire, and permanent placements, to meet the diverse needs of its clients.

Role Overview:

As a CoreOS Quality Engineer, you will be responsible for testing, debugging, and optimizing CoreOS distributions. You will work with kernel developers, cloud engineers, and platform teams to ensure stability, security, and performance across different deployments.

Key Responsibilities:

Develop and execute automated and manual test strategies for CoreOS components.

Perform regression testing, stress testing, and performance benchmarking.

Collaborate with development teams to debug and resolve kernel, bootloader, and OS-level issues.

Optimize continuous integration (CI) pipelines for CoreOS-based environments.

Contribute to test automation frameworks for OS performance, security, and reliability validation.

Analyze kernel logs, system crashes, and bug reports to enhance system robustness.

Ensure CoreOS meets security compliance and certification standards.

Work with open-source communities and contribute to CoreOS testing frameworks.

Qualifications:

Bachelor's or Master's degree in Computer Science, Software Engineering, or related field.

3+ years of experience in Linux OS testing, kernel debugging, and quality assurance.

Strong knowledge of CoreOS, Linux distributions, and containerized environments (Docker, Kubernetes, etc.).

Experience in CI/CD automation, scripting (Python, Bash), and infrastructure testing tools.

Hands-on expertise with kernel modules, system calls, and boot processes.

Familiarity with Linux security hardening, SELinux, and system profiling tools.

Experience with cloud environments (AWS, GCP, Azure) and virtualization technologies (KVM, VMware, etc.).

Strong problem-solving skills and ability to work in fast-paced, distributed teams.

Preferred Skills:

Experience with Red Hat CoreOS, Fedora CoreOS, or Atomic Host.

Knowledge of firmware validation and hardware-software integration testing.

Contributions to open-source OS development and Linux communities.

Hands-on experience with kernel crash analysis tools (kexec, kdump, perf, etc.).

If you are interested in this exciting opportunity, please send your resume to careers@americanitsystems.com

#C2C#

Must have experience in Telecom Domain

Job Title: SDET (Software Development Engineer in Test)

Location: Remote – USA

Type: Contract (C2C)

Experience Required: 5+ Years

Job Description:

We are seeking a highly skilled SDET (Software Development Engineer in Test) to join our QA team. The ideal candidate will have strong experience with API testing, scripting in any major programming language (Java, JavaScript, or Python), and a solid understanding of test automation frameworks. This is a remote opportunity open to candidates across the USA.

Key Responsibilities:

Design and execute automated test cases for REST APIs using Postman and custom scripts.

Implement authentication and authorization workflows within Postman (including pre-request scripts and test scripts).

Write and maintain test scripts using any major language (Java, JavaScript, or Python).

Utilize tools like Splunk or Kibana to debug and monitor logs.

Perform API validation and integration testing.

Execute basic SQL queries to verify backend data.

Collaborate with cross-functional teams to ensure quality across all stages of the development lifecycle.

Work on defect triaging, root cause analysis, and contribute to test strategy planning.

(Preferred) Support ERP testing or integrations related to SAP or Oracle Fusion systems.

Must-Have Skills:

Proficiency in any of the following programming languages: Java, JavaScript, or Python
Strong hands-on experience with Postman (authorization/authentication, scripting, and testing)
Solid knowledge of REST API testing and automation
Familiarity with log monitoring tools like Splunk or Kibana
Basic working knowledge of SQL
Previous experience working in the Telecom domain
Nice-to-Have Skills:
Exposure to SAP or Oracle Fusion (ERP systems)
Experience with Tosca or other automation frameworks (not mandatory)

Please share resume at [голу.kumar@excelonsolutions.com](mailto: голу.kumar@excelonsolutions.com)

=====

Job Title: QA Lead – Automation & SaaS Product Validation

Experience Required: 4+ Years

Location: Remote

Budget: Up to ₹7 LPA

Employment Type: Full-Time

Job Overview:

We are looking for a skilled and proactive QA Lead with strong experience in automation testing and validation of SaaS-based products. The ideal candidate will take ownership of the quality assurance process, implement test strategies, and work closely with cross-functional teams to ensure the delivery of a robust and scalable product.

Key Responsibilities:

- Lead QA efforts for SaaS-based product development and releases.
- Design, develop, and maintain automation test frameworks and scripts.
- Drive end-to-end product validation – functional, regression, integration, and performance testing.
- Collaborate with Product Managers, Developers, and DevOps to define quality standards and ensure alignment with business goals.
- Identify test requirements, create detailed test plans and test cases.
- Conduct root cause analysis and assist in resolving issues effectively.
- Proactively improve QA processes and introduce best practices.
- Mentor junior QA team members, if any, and promote a quality-first culture.

Required Skills & Qualifications:

- Minimum 4 years of experience in QA with at least 2+ years in automation testing.
- Solid understanding of SaaS product validation lifecycle.
- Hands-on experience with automation tools like Selenium, Cypress, or similar.
- Strong knowledge of API testing using Postman, REST Assured, etc.
- Familiarity with CI/CD tools (e.g., Jenkins, GitLab CI) and version control systems (e.g., Git).
- Good understanding of Agile development methodologies.
- Excellent analytical and problem-solving skills.
- Strong verbal and written communication skills.

Preferred Skills (Good to Have):

- Experience with cloud platforms (AWS, Azure, or GCP).
- Exposure to performance testing tools (e.g., JMeter, LoadRunner).
- Knowledge of scripting languages like Python, JavaScript, or Java

We're Hiring: Software Tester (Manual + Automation)

Location: Remote / Hybrid

Experience: 4 Years

Note: Only candidates from product-based companies will be considered.

Immediate Joiners Preferred

About the Role:

We are looking for a skilled Software Tester with hands-on experience in manual, API, and automation testing. The ideal candidate will work across frontend, backend, and data pipeline layers—contributing to quality assurance in a dynamic product development environment.

Key Responsibilities:

Create & execute test plans, test cases, and regression suites

Perform API testing using Postman and Swagger

Test ReactJS frontends and Python FastAPI backends

Validate PostgreSQL, MongoDB, and Kafka-based data pipelines

Conduct UI functional testing for dashboards and internal platforms

Validate Azure Data Factory pipelines and Databricks jobs

Track defects using JIRA or Azure Boards

(Bonus) Contribute to automation scripts using Pytest or Playwright

Required Skills:

4+ years of testing experience (Manual + API testing)

Experience with Postman, Swagger, and basic SQL queries

Comfortable testing APIs, UI interfaces, and backend systems

Experience in cloud environments (Azure preferred)

Familiar with Selenium, Git, and Linux environments

Exposure to test automation frameworks

Preferred (Bonus) Skills:

Knowledge of Kafka pipelines and streaming systems

Experience working in CI/CD pipelines and DevOps toolchains

Now Hiring: Senior Software Engineer in Test – CDMS

Veeva Systems | Remote (Preference: Boston, EST or CST)

Full-time | Mid-Senior Level

\$100,000 – \$175,000 per year + bonus + benefits

Join Veeva Systems, one of the fastest-growing SaaS companies in life sciences, as we help bring therapies to market faster and safer. We're looking for a Senior Automation Engineer to help us push the boundaries of test automation across our Clinical Data Management System (CDMS).

The Opportunity

If you're passionate about Java-based automation frameworks, API/UI testing, and scaling test infrastructure for cloud-first products, this is your chance to work in a mission-driven, product-centric environment. You'll own test automation strategies, create scalable

tools, and ensure product quality for critical healthcare applications.

What You'll Do

Design, build, and maintain scalable test automation frameworks (Java, Selenium, TestNG)

Develop tools that increase test efficiency and report clarity

Drive UI and API automation from scratch using best practices

Analyze test results, debug issues, and collaborate closely with product teams

Lead with quality in mind throughout the entire SDLC

What You Bring

7+ years of experience in software quality engineering

Expertise in Java, object-oriented programming, Selenium, and TestNG

Strong background in testing APIs and front-end UIs

Proven experience building test automation from the ground up

Strong communication skills and a proactive, detail-oriented mindset

Bachelor's degree in Computer Science, Mathematics, or a related field

Based in the Boston area or Eastern/Central Time Zones preferred

Region Eligibility

We are actively hiring candidates from the following countries:

United States

Canada

United Kingdom

Spain

Brazil

Germany

Portugal

China

UAE (Dubai)

Oman

Other eligible European countries

Please Note:

Candidates from India and Pakistan are not eligible for this role.

Applications from these locations will not be reviewed.

#Hiring

Job Title: Test Manager

Company: Vriba Technologies

Experience: Minimum 10 Years

Location: Remote

Shift Timings: US Shifts (6.30PM IST to 3.30AM IST)

Department: Quality Assurance / IT

Reports To: Offshore Delivery Manager

Job Type: Full-Time

#Job Summary:

We are seeking a detail-oriented and experienced Test Manager to lead our software testing efforts. The ideal candidate will be responsible for defining the testing strategy, managing test teams, ensuring the quality of software products, and collaborating with cross-functional

teams to deliver high-quality solutions on time and within budget.

#Key Responsibilities:

- Develop and implement comprehensive test strategies and plans for projects.
- Lead and manage a team of testers (manual and/or automation).
- Coordinate testing activities across multiple projects and teams.
- Define quality metrics and ensure adherence to testing standards and best practices.
- Oversee the creation and execution of test cases, scripts, and scenarios.
- Manage defect tracking and resolution processes.
- Collaborate with developers, business analysts, and project managers to ensure requirements are testable and met.
- Provide regular status reports and quality metrics to stakeholders.
- Ensure test environments and test data are available and maintained.
- Drive continuous improvement in testing processes and tools.

#Qualifications:

- Bachelor's degree in computer science, Information Technology, or a related field.
- Proven experience (typically 10+ years) in software testing, with at least 2 years in a leadership or managerial role.
- Proven experience in managing test plans, test strategies, and UAT status reports.
- Experience with test management tools (e.g., JIRA, TestRail, HP ALM).
- Working experience with automated testing tools (e.g., Selenium, JUnit, TestNG).
- Strong understanding of software development life cycles (SDLC), Agile, and DevOps practices.
- Excellent analytical, problem-solving, and organizational skills.
- Strong communication and leadership abilities.

#Preferred Qualifications:

- ISTQB or equivalent certification.
- Experience in automation, performance and security testing.
- Knowledge of CI/CD pipelines and cloud-based testing environments.

Job Title: Application Development - Quality Assurance Manager IV (Contractor)

Duration: 08/04/2025 – 04/26/2026

Location: Remote (working Eastern Time Hours)

Work Authorization: Green Card or US Citizen only

Compensation: \$56/hour (Corp-to-Corp)

Overview

Seeking a QA Manager / Project Manager IV with strong leadership skills and a background in quality assurance. This is not a hands-on QA role, but requires deep understanding of QA methodologies, strategy, and execution. The successful candidate will help manage large-scale enterprise transformation projects with a focus on Execution Excellence and Process Efficiency.

The role sits within a QA organization responsible for system integration testing and transformation initiatives, including tools such as Salesforce, SAP, and others.

Key Responsibilities

Execution Excellence

Lead QA initiatives through the full SDLC

Design and develop robust testing strategies and solutions
Prioritize tasks and drive execution
Collaborate with stakeholders and assist in discovery, estimations, and test strategy development
Communicate updates, blockers, and progress across leadership levels
Document project status, risks, roadblocks, and resolutions
Mentor and guide junior QA team members
Contribute to the defect triage process
Help manage an additional scrum team
Ensure integration of software systems and components
Report on QA metrics and KPIs
Process Efficiency
Improve automation coverage
Research and propose new tools, frameworks, or technologies
Lead prioritization across teams
Advocate and support Agile/SAFe processes
Requirements
12–15 years of overall IT experience
7–8 years of QA experience, with 4+ years in a managerial role
Strong experience in SDLC and Agile/Scrum methodologies
Experience with enterprise-level system integration and testing
Experience with Salesforce, SAP, or similar transformation platforms (preferred)
Strong leadership and cross-functional communication skills
Background in testing APIs (REST, SOAP), using tools like Postman, SOAP UI, PUTTY, WINSCP
Hands-on experience with automation tools: Selenium, Cucumber, Java, C#, Gherkin
Exposure to performance/load testing using JMeter, LoadRunner
Experience using tools such as JIRA, Confluence, Wiki
Knowledge of video/media platforms (a plus)
Bachelor's degree in Computer Science or related technical discipline
Ideal Candidate Traits
Can hit the ground running with minimal supervision
Strong communicator at both technical and leadership levels
Comfortable with fast-paced, multi-team environments
Proven experience in leading QA teams on enterprise transformation initiatives
Proactive in identifying opportunities for process and efficiency improvement
· Interested candidates can share their resume at
pallavi.desai@odeinfinity.com with the subject line: Application
Development - Quality Assurance Manager IV (Contractor)

Position: QA Engineer / Tester – Workflow Automation & Insurance
Experience: 3 – 4 Years
Location: India / Remote
Working Model: Remote
Notice Period: Immediate Joiners Preferred

Are you a detail-oriented QA Engineer passionate about automation, insurance tech, and delivering quality at scale? Join our growing team and help test cutting-edge BPM solutions for global enterprises!

What You'll Do:
Design test cases for BPM workflows (Flowable, IBM BAW, Pega), APIs, and enterprise portals
Perform end-to-end, regression, smoke, and sanity testing
Log defects with clarity using tools like JIRA/ALM and ensure resolution
Collaborate with developers, project managers, and clients in Agile/Scrum environments
Validate insurance workflows and role-based logic
Prepare test reports, participate in UAT/sprint reviews, and track progress

What We're Looking For:
3+ years of experience testing BPM/workflow automation tools
Strong hands-on experience with tools like Postman, SOAPUI, JIRA, TestRail, etc.
Exposure to portal testing (React/Angular UIs) and REST/SOAP API validation
Good knowledge of insurance domain processes (claims, policy lifecycle, compliance)
Familiarity with SQL and basic understanding of Java/Spring Boot or Node.js
Strong documentation, test planning, and communication skills

Good to Have:
Experience with Selenium, Playwright, or Cucumber for UI/API test automation

Knowledge of compliance standards (HIPAA, GDPR, ACORD)
Exposure to IBM MQ, Kafka, or FileNet ECM integrations
ISTQB or domain certifications (e.g., CPCU)

Why Join Us?

Work on BPM/ECM transformation projects for Fortune 500 clients across APAC, MEA & South America
Learn from industry experts in insurance & financial services
Fast-track your growth into QA Lead & Automation roles
Great work culture, flexible remote setup, ESOP & upskilling opportunities

We're Hiring: QA Engineer

Remote | Contract

At Visionex Digital (VXD), we're building bold, user-focused digital products fast. If you're someone who loves breaking things (so users don't have to), we want you on board. We're looking for a QA Engineer who's detail-obsessed, curious, and ready to help us ship smarter, cleaner experiences.

This role is for someone who knows their way around — we're looking for confident testers who can hit the ground running and raise the bar for quality.

What You'll Be Doing:

Shared by **Job Curator** - Join us on Telegram: <https://t.me/testingexperiencedopenings>

(Test Automation | Selenium | Cypress | Script Writing | Manual Testing | Functional Testing | Mobile QA | Regression Testing | Test Case Design | BrowserStack | Bug Reporting | Team Mentoring | Process Improvement | QA Strategy)

- Plan and run test cases that catch what others miss — and automate the ones we repeat
- Dig into regression, functional, and cross-browser/device testing
- Log bugs like a pro — clear, detailed, and impossible to ignore
- Build lightweight test scripts and reusable checks to help us move faster
- Be part of every release cycle and help us ship with confidence
- Mentor junior QA teammates — share your mindset, not just methods
- Help shape and evolve our QA processes as we grow

Who You Are:

- You have 3–5+ years (excluding internships) of hands-on QA experience and you're just as comfortable testing features as you are defining how testing should work
- You know your way around test case tools and bug trackers
- You're curious, methodical, and love getting to the root of a problem
- You're organized, independent, and always one step ahead
- You are confident owning both manual and automation testing building scalable test suites using tools like Cypress or Selenium, and you know when to script and when to test manually
- You take full ownership of QA for the features you test from identifying edge cases to ensuring coverage without being told twice
- You stay current with QA best practices, emerging automation frameworks, and love improving how teams test at scale

What's in It for You:

Fully remote, flexible setup — work from wherever you do your best work
A tight-knit team building cool things, fast

Ready to Jump In?

Send your CV to heroes@visionexdigital.com.au with the subject line: QA Engineer Application

Work visa type: GC/CITIZENS AND MUST BE

Duration: 12 Months+

Send me resume bindus@boston-technology.com

Position Overview

Primary Responsibilities

Test Automation

- Assist in developing and maintaining automated test scripts for high-value regression tests and repeated workflows.
- Use tools like Selenium, EasyRepro, or other Power Platform-friendly automation frameworks.
- Collaborate on building and maintaining a test automation roadmap aligned with evolving application features.
- Ensure automation assets are documented, version-controlled, and integrated into CI/CD pipelines via Azure DevOps.
- Experience with low-code/no-code test automation suites (e.g., Power Automate Desktop, Leapwork, TestProject, Tricentis Testim) is strongly preferred to scale test coverage and enable business-friendly automation.
- Support creation of synthetic test data and reusable automation components.
