#ValueLabs is #HiringNow: for #Finacle_Test_Engineer for #Dubai_Location!

Drop your resumes to mentioned mail ID below
Jobs.bfs2@valuelabs.com

Role: Finacle Test Engineer
Experience: 5+ Years
Work Location: Dubai (Onsite)
Notice Period: 0-60 Days

Key Responsibilities

Core Requirement and Role Focus:

- Primary expectation: Candidate should be a core Finacle test engineer with strong understanding of the #Finacle product, not someone who has only performed basic transaction inquiry checks through Finacle menus.
- Functional focus area: Strong focus on Assets track, specifically Loans, including retail and commercial loans.
- Product understanding: Candidate should understand the end-to-end Finacle product flow and how the loans lifecycle is handled through Finacle.
- Automation focus: Candidate should understand the existing automation framework and be able to enhance it.

Finacle Version and Module Expectations:

- Finacle version: #Finacle11x experience is preferred because the current environment uses 11x. .
- Mandatory functional depth: #Assets track / #Loans module experience is the most important functional requirement.
- Assets and liabilities workflow: Strong loans exposure is expected;

Test Automation Expectations:

- Automation tools: Candidate should have test #automation experience in either #Selenium with #Java or #Playwright with #TypeScript.

Role: Automation Test Engineer

Location: Hyderabad, India

Type: Contract

3 months contract position

musquare payroll

client requirement

area - DDColony

1.5 LPM

Format: Hybrid (In-Person / Remote)

About the Role

Key Responsibilities

- Design, implement, and maintain automated test scripts for web applications built with React and Node.js.
- Use tools such as Selenium, Cypress, Playwright, Vitest, and Jest to develop robust and scalable automation frameworks.
- Maintain test suites to ensure they reflect ongoing code changes and product evolution.
- Perform RESTful API testing, including endpoint validation, data integrity checks, and response validation.
- Use mocking techniques to simulate backend services and isolate dependencies.
- Write tests for Python-based machine learning models to validate performance, accuracy, and edge cases.
- Collaborate with data scientists to define appropriate testing and evaluation strategies for ML models.
- Execute functional, regression, integration, and performance tests.
- Identify, document, and track bugs; collaborate with developers for timely resolution.
- Generate test execution reports and provide QA sign-off for releases.
- Work closely with development teams in an Agile/Scrum environment.
- Participate in design and requirements reviews to ensure testability and quality metrics are addressed early in the cycle.
- Integrate automated tests into the CI/CD pipeline for continuous quality checks.
- Perform testing in environments hosted on AWS, Azure, or GCP.

Required Skill Set

- 10+ years of experience in automation testing for web applications and APIs.
- Knowledge of BDD/TDD testing methodologies.
- Strong knowledge of React and Node.js application testing strategies.
- Proficiency in Python scripting.
- Familiarity with Machine Learning concepts and testing methods for ML models.
- Utilize tools like Claude, Gemini, and AI agents for documenting, testing, and debugging.
- Hands-on experience with one or more automation tools: Selenium, Cypress, Playwright, Vitest, Jest (or similar).
- Proficiency in RESTful API testing and mocking.
- Basic understanding of relational databases and querying.
- Experience with cloud platforms such as AWS, Azure, or GCP.
- Understanding of CI/CD tools and automated deployment processes.

Nice to have

- Experience with performance testing tools (e.g., JMeter, k6).
- Experience with observability frameworks such as OpenTelemetry, Prometheus, Grafana, etc.

- Familiarity with containerized test environments using Docker.
- ISTQB or similar testing certification.

=====

Hiring: SQA Engineer (Automation Testing)

Job Type: Full-time

Experience: 4–5 Years

Location: Onsite/Remote

About the Role:

Techling (Private) Limited is looking for a talented SQA Engineer with 4–5 years of hands-on experience in Software Quality Assurance and Automation Testing. The ideal candidate should have strong expertise in designing, developing, and maintaining automated test solutions while ensuring the delivery of high-quality, reliable software applications.

What You'll Do:

- Design, develop, and execute automated test scripts for web and mobile applications
- Create and maintain robust test automation frameworks
- Perform functional, regression, integration, and end-to-end testing
- Identify, document, track, and verify software defects throughout the development lifecycle
- Collaborate closely with developers, product managers, and QA teams to ensure product quality
- Integrate automated tests into CI/CD pipelines for continuous testing
- Analyze test results and provide detailed reports with actionable insights
- Ensure software quality by following industry-standard QA methodologies and best practices
- Participate in sprint planning, requirement analysis, and release validation activities

What We're Looking For:

- 4–5 years of hands-on experience in Software Quality Assurance
- Proven expertise in Automation Testing
- Strong understanding of test automation frameworks and industry best practices
- Experience with automation tools such as Selenium, Cypress, Playwright, or similar frameworks
- Strong knowledge of software testing methodologies, test planning, and defect management
- Familiarity with API testing and performance testing is a plus
- Experience working with Git, Agile/Scrum methodologies, and CI/CD environments
- Excellent analytical, troubleshooting, and communication skills

Preferred Qualifications:

- Experience with performance and load testing tools
- Knowledge of SQL and database testing
- Familiarity with cloud-based testing environments
- ISTQB Certification will be considered an advantage

How to Apply:

Send your updated resume to hr@techling.tech

or apply via WhatsApp: 0327-3528572

=====

We're Hiring: QA Engineer (Automation + Manual Testing) | Remote | 4–7 Years Experience
Are you passionate about building high-quality software through a combination of test automation and manual testing? We're looking for an experienced QA Engineer who can own feature testing end-to-end—from story grooming to release sign-off.

Key Skills:

Playwright & Selenium WebDriver
TypeScript / JavaScript / Python
REST API Testing (Postman)
MongoDB (Basic Queries)
JIRA, TestRail, Confluence
Agile / Scrum
Chrome DevTools
Regression, Exploratory & API Testing

Good to Have:

BFSI / Insurance / FinTech domain experience
Azure AD / MSAL authentication testing
Chatbot / Conversational AI testing
Docker
Twilio integration testing

What You'll Do:

Develop and maintain Playwright and Selenium automation test suites.
Perform end-to-end, regression, exploratory, and API testing.
Validate role-based access control, dashboards, analytics, and AI-driven workflows.

Create clear, actionable bug reports and collaborate closely with developers and product teams.

Contribute to CI automation and work in an Agile sprint environment.

Location: Remote

Experience: 4–7 Years

If you're looking for an opportunity to work on enterprise products in a collaborative and fast-paced environment, we'd love to connect.

Share your updated resume via direct message or sent via Below mail ID, and I'll get in touch.

We're Hiring – Salesforce Automation QA Engineer

Are you passionate about ensuring software quality through automation? We're looking for a talented Salesforce Automation QA Engineer to join our growing team.

Job Title: Salesforce Automation QA Engineer (Selenium)

Job Type: C2C

Experience: 5+ Years

Work Mode: Remote/Hybrid

Shift Timing: 10:00 AM – 7:00 PM

Budget- 1 LPM + GST

Job Description:

We are seeking an experienced Salesforce Automation QA Engineer with strong expertise in Salesforce testing and Selenium automation. The ideal candidate should have hands-on

experience testing Salesforce applications (Sales Cloud/Service Cloud), designing automation frameworks, and executing end-to-end testing to ensure high-quality software releases.

Key Responsibilities:

- Perform functional, regression, integration, and end-to-end testing for Salesforce applications.
- Design, develop, execute, and maintain Selenium automation test scripts.
- Validate Salesforce functionalities across Sales Cloud and Service Cloud modules.
- Develop and maintain reusable automation frameworks and test cases.
- Identify, document, and track software defects through resolution.
- Collaborate with developers, business analysts, and product owners to ensure quality deliverables.
- Participate in Agile ceremonies including sprint planning, daily stand-ups, and retrospectives.
- Support CI/CD pipelines by integrating automated test execution.
- Ensure application quality throughout Salesforce releases and deployments.

Required Qualifications:

- 5+ years of experience in Salesforce QA Automation.
- Strong hands-on experience with Salesforce Testing (Sales Cloud and/or Service Cloud).
- Expertise in Selenium WebDriver automation.
- Good understanding of Salesforce architecture, objects, workflows, and release management.
- Experience in functional, regression, and integration testing.
- Familiarity with defect tracking and test management tools.
- Knowledge of Agile/Scrum methodologies.
- Strong analytical, communication, and problem-solving skills.

Preferred Skills:

- Experience working with CI/CD tools such as Jenkins, Azure DevOps, or GitHub Actions.
- Exposure to API testing using Postman or REST Assured.
- Knowledge of Salesforce release management and deployment processes.
- Salesforce certification is a plus.

If you're ready to work on exciting Salesforce projects and grow your career, we'd love to hear from you!
